PROFESSIONAL SUMMARY

Data analyst with a B.S. in Statistics and hands-on experience building statistical models, developing interactive dashboards, and translating complex data into actionable recommendations for stakeholders. Skilled in Python, SQL, and R, with applied experience across healthcare analytics, people analytics, and operational strategy.

EDUCATION

UC Riverside

B.S. in Statistics, Minor in Information Systems.

Jun 2026

Relevant Coursework: Business Analytics, Database Systems, Decision Analysis, Design of Experiments, GIS for Business Applications, Generalized Linear Models, Regression Analysis, Sampling Surveys, Statistical Computing with SAS and R, Statistical Inference, Systems Analysis and Design

EXPERIENCE

People Analytics / Operational Strategy Extern

Mar 2026 – May 2026

Amazon/Extern

- Analyzed 200-300 Glassdoor reviews and 30 YouTube videos to surface recurring workplace pain points at Amazon Fulfillment Centers, applying thematic analysis and root-cause thinking to turn unstructured data into actionable insights.
- Developed a persona-based recommendation for improving the associate experience, using insight synthesis and storytelling to design a practical team-led solution for a simulated business scenario.
- Cleaned and processed unstructured text data using Python, NLTK, and TextBlob to support people analytics workflows.

Healthcare Data Analytics Extern

Jan 2026 – Mar 2026

TruBridge/Extern

- Applied Difference-in-Differences modeling in Python across all 58 California counties to analyze Medi-Cal policy changes, identifying increased diagnosis rates in rural populations.
- Identified evidence of diagnostic unmasking, demonstrating that spikes in county-level disease prevalence reflected improved medical detection rather than worsening public health outcomes.
- Built an interactive browser-based dashboard using Chart.js and vanilla JavaScript, with data processed via Python and pandas, to visualize 11 statistical charts and guide stakeholder resource allocation.

Sponsorship Lead, Operations Committee

Feb 2024 – Jun 2025

UC Riverside Citrus Hack

- Secured 12 corporate sponsors, providing funding and in-kind resources for a 400+ participant university hackathon.
- Designed a multi-tier sponsorship proposal and led outreach to 600+ companies to drive partner engagement.
- Managed day-of event operations, resolving real-time challenges to ensure a smooth experience for attendees and sponsors.

PROJECTS

Stormwater Overflow Predictive Modeling

General Statistical Models (STAT 171), UC Riverside

- Built and optimized a Negative Binomial regression model in RStudio to predict stormwater overflow events using infrastructure and environmental variables, addressing overdispersion in count data.
- Identified major overflow risk factors: rainfall, impervious surface area, combined sewer systems (~42% higher risk), and overdue maintenance (~33% higher risk).
- Validated model via train-test evaluation and translated findings into recommendations for flood mitigation and planning.

New York City Air Travel Analysis

Intro to Data Science (STAT 167), UC Riverside

- Analyzed 10+ years of NYC flight data using ANOVA and regression modeling in RStudio to evaluate airport efficiency, airline performance, and weather-related delays.
- Identified significant differences in delay patterns across JFK, LGA, and EWR ($p < 0.001$), with delays consistently increasing later in the day due to operational bottlenecks.

SKILLS

Programming & Tools: Python, SQL, R, SAS, Microsoft Power BI, Microsoft Excel, Prompt Engineering

Statistical & Data Analysis: Regression Modeling, Generalized Linear Models, ANOVA, Hypothesis Testing, Exploratory Data Analysis, Data Cleaning, Model Evaluation, Survey Sampling & Inference

AI Tools: Claude, ChatGPT, GitHub Copilot, Microsoft Copilot, Gemini, Perplexity

Business & Communication: Data Storytelling, Stakeholder Reporting, Operations Management, Sponsorship Strategy
